Interpon D High Durability

High Durability Coatings

Interpon D High Durability Finishes are architectural powder coatings especially designed to give outstanding exterior weatherability on buildings around the world. Having all the advantages of powder coatings such as film toughness, cost effectiveness and low environmental impact, **Interpon D** High Durability Finishes use innovative polymer technology to provide long term cosmetic and functional protection of substrates in the most demanding environments.

There are two performance levels to choose from:

ULTRA DURABLE FINISHES:

Interpon D2000

The **Interpon D2000** range offers significantly improved gloss retention and enhanced resistance to chalking and fading in comparison to standard architectural powder coatings. All brands and products in this series meet the relevant long term weathering architectural standards such as AAMA 2604 and Qualicoat Class 2. Please refer to the product brochure for the D2000 series for more details.

HYPER DURABLE FINISHES:

Interpon D3000 – Fluoromax

An even stronger performance level is provided by **Interpon D3000** products, which are based on AkzoNobel's innovative Fluoromax technology. With a proven record of 10 years Florida performance and compliance with AAMA2605, Qualicoat Class 3 and GSB Premium Series, Interpon D3000 is the powder alternative to fluorocarbon liquid coatings (PVDF and PVF2).

For technical reasons associated with color reproduction and powder application, the colors shown on this color card may not exactly match the powder colors applied on industrial coating lines. Reference panels are available on request.

Superior Weatherability, Extensive Choice

The superior technical performance of **Interpon D** High Durability Finishes is available in an extensive range of standard and customized shades, gloss levels, special finishes and metallic effects to provide the widest scope for design.

This color card shows examples of Metallics.

D2000 and **D3000** are based on different technologies, which results in a matter finish of **D3000** metallics compared to **D2000** metallics. Due to this variation in the final appearance, the shown metallic effect colors have an individual designation in each brand. This card shows **D2000** finishes, for samples of **D3000** finishes, please contact us directly.
